PROFILE

Computer Science and Engineering student on a Bachelor-level exchange at Blekinge Institute of Technology, with practical experience building working prototypes in Python and JavaScript: interactive Streamlit applications, a scikit-learn price-estimation model, a full-stack app connected through REST APIs, and an academic study evaluating explainable-AI methods. Interested in how AI agents and well-designed digital tools can make expert knowledge easier to find and apply; keen to learn Microsoft Copilot Studio and Power Platform.

EDUCATION

Blekinge Institute of Technology (BTH) Aug 2026 – Jun 2027
Student Exchange Programme – Bachelor Qualification Plan in Computer Science *Karlskrona, Sweden*

Jawaharlal Nehru Technological University Anantapur (JNTUA) 2023 – 2027
Bachelor of Technology in Computer Science and Engineering – in progress *India*
Degree expected after completing the BTH exchange, subject to the university's award schedule.

TECHNICAL SKILLS

Programming: Python, JavaScript (ES6+), SQL, HTML, CSS
Data and Applied AI: Pandas, NumPy, scikit-learn, Matplotlib, Seaborn, Streamlit, Joblib
Explainable AI: SHAP, LIME; BreakDown (research exposure); model interpretation
Web and Integration: Node.js, Express.js, REST API development, MongoDB, MySQL
Tools: Git, GitHub, Postman, VS Code, Vercel, Streamlit Community Cloud

PROJECTS

COVID-19 Spread Simulation and Visualization (Personal Project) Live Demo | GitHub
- Developed a Python simulation workflow that generates synthetic population records from country population and age-distribution data and simulates health-state transitions over a user-selected date range.
- Used Pandas to produce individual-level and aggregated country/age-group time-series CSV files.
- Built a Streamlit interface to run scenarios and explore Matplotlib charts; deployed on Streamlit Community Cloud.

AI Real Estate Valuation System (Personal Project) GitHub
- Built a Streamlit application that estimates residential property prices using a scikit-learn Random Forest Regressor.
- Prepared housing and location features with Pandas and NumPy; used Joblib for model handling.
- Built interactive Matplotlib and Seaborn views of price versus distance and house age, market-price distributions and model feature importance.

WardrobeIQ – Smart Wardrobe Planner (Personal Project) GitHub
- Developed a full-stack web application with an HTML, CSS and JavaScript frontend for managing clothing items, images, categories, colours and notes.
- Built Node.js and Express.js backend services with MongoDB storage and connected the frontend to them through REST endpoints.
- Troubleshot application and API integration issues while iterating on the frontend–backend flow.

ACADEMIC RESEARCH

XMENTOR – Explainability-Driven Feature Selection for Software Defect Prediction Academic project
- Investigated SHAP, LIME and BreakDown explanations of a Gradient Boosting defect-prediction model on the ActiveMQ 5.8.0 dataset.
- Explored fixed-threshold and entropy-based strategies for comparing feature-ranking agreement across methods.
- Compared and interpreted feature-selection outcomes using a structured experimental methodology.

CERTIFICATES AND ACTIVITIES

- **Infosys Springboard Virtual Internship 7.0** (2026) – completed; certificate pending issuance. Completion Email
- **Web Development Internship** – Certificate of Participation. Certificate
- **Ideation 2026, Phase 1** – Certificate of Merit. Certificate
